1. Which protocol provides connectionless datagram delivery at the network layer?

A. TCP

B. IP

C. HTTP

D. FTP

Answer: B

Explanation: IP is the network-layer protocol for connectionless datagrams.

2. In relational databases, which constraint must a primary key satisfy?

A. It may contain NULL values

B. It must be unique and non-null

C. A table may have several primary keys

D. It must be an integer

Answer: B

Explanation: A primary key uniquely identifies a row and cannot be NULL.
